Queen Elizabeth Island Archipelago 10,000Km Seismic Data Package

The Queen Elizabeth Island Archipelago of the Arctic Islands is a region where hydrocarbon resources are believed to be substantial and untapped potential believed to be vast. The seismic package of scanned and reprocessed data, focuses on the Arctic Basins and other areas of specific interest, and the package has been created to complement the content of the study, This substantial volume of data is sold as a stand alone data package. At this time in excess of 10,000 line Kms of seismic is available, including composite well tie lines through Queen Elizabeth Island region. An additional 6000 kms is planned for phase III for release in 2008.

Package Price GBP50,000
