2D Paper and Tape

TargetGeodata offers a bespoke 2D seismic processing service. Our expertise lies in the correct treatment of older data sets. Processing from original field tapes is also undertaken. The following processes can be utilized:

Random Noise Attenuation including FX Deconvolution

Velocity Analysis (including 4th order correction)

Velocity Function Smoothing

NMO Correction

Bandpass & Time Variant Filtering

FK Filtering

Predictive Deconvolution

Coherency Enhancement

Trace Muting, Scaling and Balance

Migration: Kirchoff, finite difference, FK, etc.
